Joint operating agreements (JOAs) are well-accepted standard agreements in the oil and gas industry which regulate the relationship between the parties to a joint venture: the operator and the non-operator. Traditionally, the operator is responsible for performing operations on behalf of the consortium, while the non-operator is responsible for contributing to the financial commitments of the ...

Joint Operating Agreements: An International Comparison from Petroleum Law, Journal of Energy, Natural Resources and Environmental Law, Vol.8(1), pp.49-79. has been cited by the following article: Article

This new major work will analyse the critical concerns and challenges that IOCs and NOCs face in this new type of consortium, and will ultimately suggest alternative solutions to find common ground between these parties. The book is divided into three chapters, which respectively deal with the conduct of operations, the financial issues relating to the consortium and the boilerplates of the agreement.. Each chapter will include analysis from the perspectives of four different types of company.

Analyzes the main features of the joint operating agreement for offshore operations in the UK. This edition includes more alternative clauses and commentary, a new chapter on offtake of petroleum and a comparison of the provisions of UK offshore joint operating agreements and agreements elsewhere

This publication provides in-depth analysis of worldwide joint operating agreements (JOAs), unit operating agreements, and similar agreements based on commonly-used forms in different jurisdictions, common modifications to those forms and rationales for those changes, and cases and secondary source material interpreting joint operating agreements. Joint operating agreements are one of the most common, and important, types of upstream oil and gas agreements. Though JOAs worldwide deal with similar issues, the ways in which these issues are handled can differ depending on the jurisdiction and type of form. By dealing with JOAs on a global scale, this publication will facilitate an understanding of these agreements generally, the terms of any particular JOA, how and why parties from other jurisdictions may view a project differently, and creative cross-cultural solutions for common JOA-related issues. The JOA treatise is unmatched by any other publication and features: • Comprehensive coverage of the issues which have broad geographic appeal. • Comparative analysis of different types of joint operating agreements and explanations of how the oil and gas industry functions in other jurisdictions. • An examination of how counterparties may view certain clauses along with creative ways to deal with problems that arise during the negotiation of a JOA and the administration of an executed agreement. • High-level discussions that permit readers new to this type of agreement to develop a solid understanding of what a joint operating is and does. • Citations to common forms, cases, and secondary source material that serve as a reference guide for further study. Note that this publication was originally published by The Institute for Energy Law of The Center for American and International Law and was peered reviewed by expert practitioners.

The Professional Negligence and Liability Reports aim to provide the most up-to-date and important cases dealing with professional negligence arising in a wide range of professions, from surveyors and estate agents to doctors, solicitors and accountants.

There are two ways of selling a business - through the sale of shares or through the sale of assets. This book deals solely with the latter.

First published in 1956, Underhill's has become one of the main guides to the law and procedure relating to liquor, gaming, betting and lottery licensing. Practical in approach, the book gives advice on tactics and sets out each step involved in the successful making or opposing of a licensing application. Now in its eleventh edition, it has been completely updated, and features a new chapter on Appeals detailing the grounds on which an appeal is possible. Forms and specimen pleadings are also included. This edition also considers the practical implications of the Licensing Act 1988.

This new second edition provides a pragmatic examination of the provisions of a typical JOA in the order that they appear, with a particular focus on the critical issues of scope, the operator s role, joint and exclusive operations, default, transfers and decommissioning"

The Joint Operating Agreement (JOA) is widely used in the petroleum industry as a contractual framework for joint ventures across different continents and standards. The first part of this book deals with considerations prior to entering into a JOA, such as compliance with bribery laws; standards, practices and procedures across the petroleum industry; and enforceability of JOAs and understanding decommissioning obligations. The second part focuses on key clauses within any JOA covering topics including health and safety considerations; liability and insurance; and control of operations and expenditures. This is a unique publication dedicated to analyzing all of these key practical issues faced by oil and gas companies in different parts of the world in negotiating and implementing a JOA. [Subject: Contract Law, Comparative Law, Energy Law]

Historically oil and gas upstream activities were developed in common law jurisdictions. In the same manner the first model form of Joint Operating Agreements (JOAs) was developed in 1956 by the American Association of Professional Landmen. This historical model form provided the industry with guidance for future generations of JOAs. Although the JOAs were initially used in common law jurisdictions (US, Canada, UK, etc.) later on it was used in civil law jurisdictions throughout South America, Africa, Europe and Asia. There is no JOA model available in the industry to address all of the requirements from a large variety of civil law perspectives. The Norwegian and Greenlandic authorities offer their own JOA models, which are suitable within these jurisdictions. The AIPN JOA model form 2012 issued a short guidance note for civil law issues. Although this initiative was very much welcomed by the industry, it was not possible to provide extensive guidance on every detail and provide advice on exactly what your JOA provisions should look like at the very end. Therefore, the main issue for the petroleum industry is the fact that large upstream investments could be done based on a contract that might not be enforceable in a civil law jurisdiction. This book analyses the main issues that a JOA might face within seventeen civil jurisdictions with large oil and gas reserves or at least large potential (including but not limited to Angola, Argentina, Brazil, China, France, Holland, Indonesia, Kazakhstan, Mexico, Mozambique, Norway, Russia, Uzbekistan, Venezuela, etc.). It is a unique and valuable publication for practitioners, legal counsel, businessmen, and academics involved in the upstream industry around the world.
